Data Sheet Redroam

Connectivity

Product overview

Redroam powered by iPass, based on the iPass Mobile Office service is ideal for today's business traveller who needs access to systems, information resources and people while in motion. Redroam is all that is needed to get global access to the Internet and corporate networks in a safe, quick and seamless way, offering a pay as you go virtual office connection. No additional hardware or subscription is required.

Companies constantly look to improve communications and productivity so customers can be provided with instant communication, timescales can be met and businesses can be operated at optimum speed.

Redroam gives users on-demand connectivity to the Internet and their corporate networks across a variety of access technologies. It offers access to over 79,000 Ethernet and Wi-Fi hotspots worldwide, including T-Mobile HotSpot locations in the US, Europe and in over 400 airports worldwide. It helps users stay productive by using the same consistent user experience when connecting to corporate or personal wireless LANs and public hotspots.

According to a study by management consultants at Deloitte, mobile and remote working is forecast to rise from the current millions to at least tens of millions by 2010. The report also stated that by 2008, 41 million corporate employees globally may spend at least one day a week tele-working. Employees need a reliable system that is easy to use, whilst ensuring that up to date security policies are in place.

Access anywhere

- Public WiFi hotspots – global coverage with almost 80,000 hotspot locations
- Wired narrowband – thousands of access points in over 160 countries
- Public Ethernet 'wired' broadband – global coverage in 2,000 business oriented locations
- Wireless workspace – seamless integration of corporate WLAN

Key features & benefits

- Pay as you go, no additional hardware, no subscription
- Cost effective solution for Wi-Fi roaming with single corporate bill
- No monthly subscription charges
- Automatically detects all Wi-Fi data networks that are in range, including public hotspots. Available Ethernet services are also displayed when a network cable is plugged into a live outlet
- Corporate resources are accessed using high speed wireless WAN data connections which in turn provide an identical experience to working in the office
- Free email and telephone support 24/7, 365 days a year
- Improved productivity for remote/travelling workers
- Auto connects to preferred campus and personal networks
- Location based interface displays all available connection options
- Easy to use pre-configured software which can be used from laptops, desktops, Mac, Palm and handheld/PDA devices
- Runs on all common Windows platforms

Why Redroom?

- Does your Business have a solution which allows users to work in every eventuality?
- Are you concerned about supporting your mobile sales force?
- Is it difficult to predict the costs of your global connectivity each month for your travelling Executives?
- Is dedication to customers and provision of a reliable service to them high on your Business Continuity plan?
- Redroom enables employees to stay connected whilst mobile or in the event of a disaster, whilst still maintaining high levels of security
- Redroom is the solution for continuous working and high productivity

Redstone Internet Solutions

Redstone is committed to providing individually-tailored, leading edge Internet and networking solutions – comprising networks, hardware, ISP and associated support services – to the business and public sector markets. Several thousand organisations in the UK currently use the company's services for single user, multi-site and homework applications. Redstone's flexible approach to both the specification of products and the recommendation of services ensures that solutions are designed to meet specific business objectives and provide a measurable return on investment.
