Redstone Managed Solutions to offer Broadband Max

Redstone offer up to 8Mb broadband to businesses

London, UK, 3 October 2006 – Internet and IT services provider, Redstone Managed Solutions, an operating division of Redstone plc, has today announced that it can now offer Broadband Max (speeds of up to 8Mb).

One area of the UK set to take advantage of Broadband Max is Cambridge. Redstone Managed Services has built a city-wide Ethernet network creating a Metropolitan Area Network (MAN) around the city. Companies connected to the MAN are able to use it to access the Internet at high speed as well as connecting between multiple sites.

“Broadband Max offers businesses the opportunity to exploit their online capabilities. As users start to realise the benefits of high bandwidth, always-on Internet access, many businesses are starting to become more and more hungry for even faster connections,” said Tariq Saied, managing director, Redstone Managed Solutions.

He continued: “Our service automatically provides you with the fastest speed available in your area. Speeds of up to 8Mb enable businesses to work more efficiently as download speeds noticeably increase and quality of service remains when multiple tasks are run simultaneously.”

Redstone Managed Solutions is a business-only provider of Internet services and has over 10 years experience as an Internet Services Provider. With a dedicated customer service centre, businesses can rely on the company to provide a reliable, high-speed, always-on connection.
