

DATA SHEET

Redstone Managed Solutions

Managed Firewall

Product overview

Redstone's Managed Firewall Service is based on Cisco's world-leading technology and provides organisations with an individually configured firewall to protect corporate networks and data communications systems from unauthorised access. The firewall is installed, continuously managed and monitored by Redstone. IP-based Virtual Private Network (VPN) facilities can also be provided as part of the same service. This gives organisations the ability to set-up cost-effective, secure communications between remote sites across the Internet.

Typical implementations

Correctly specified, installed and constantly managed firewalls are essential for any company with access to the Internet. Redstone's regularly updated Managed Firewall Service is ideal for companies who want to protect their existing corporate network but do not want the expense or responsibility of installing and managing their own firewall solution.

Key features & benefits

- **MANAGED SERVICE**

The firewall is set up, installed and managed by Redstone's Internet security experts allowing organisations to free-up IT staff for other projects and concentrate on core business activities.

- **A TAILORED, FLEXIBLE SOLUTION**

Redstone works with clients to define their Internet security policies. The firewall will be individually tailored to help provide the services that comply with these.

- **SECURE**

Utilising Cisco's flexible range of firewalls, Redstone's Managed Firewall Service provides precise control of the services and protocols available to an organisation's network users.

- **ROUND THE CLOCK SUPPORT**

Redstone provides 24/7 proactive support to ensure maximum availability.

- **FAILOVER OPTION**

Redstone's Managed Firewall Service has a failover option to ensure continuous operation in the unlikely event of failure.

Managed Firewall

Return on investment

Redstone's Managed Firewall Service avoids the need for businesses to make the capital expenditure necessary to buy their own firewall hardware and software. In addition, staff will not need to be trained (and retrained) in the usage and management of these complex yet vital systems. The Managed Firewall Service provides organisations with an easy to manage solution with no hidden costs.

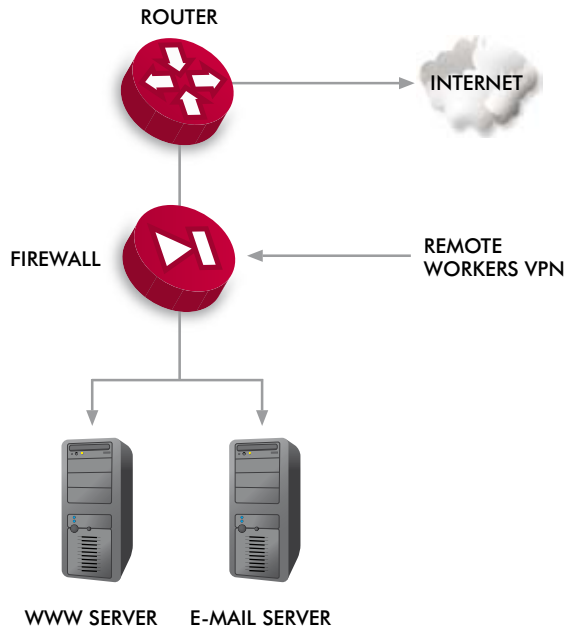

Ongoing support

Around the clock remote management and monitoring of the firewall is carried out from Redstone's Remote Management Centre to ensure maximum availability and security protection of your critical services.

Technical specification

- Guaranteed QoS solutions available for voice and video applications
- Full range of access options to cater for sites from large central offices to homeworkers
- SSL and IP Sec solutions available
- Global roaming solutions available
- Full UK geographic service availability
- Full project implementation and support services available

Redstone's Managed Firewall Service

About Redstone Managed Solutions

Redstone Managed Solutions has over 10 years experience of providing IT Infrastructure and Internet Solutions.

Solutions and services include:

- IT Solutions, Managed Services and Outsourcing
- Internet Solutions
- Application and Systems Development
- Managed Hosting and Business Continuity Solutions
- Network Infrastructure Management
- IT and Network Consultancy

Redstone Managed Solutions can manage and support your business networks from enterprise level through to the desktop, with a comprehensive single source service for business. We also provide hosting solutions from our London and Cambridge data centres, with scalable solutions, from a single server to multiple racks. Internet solutions include managed MPLS networks, managed firewall, email filtering, online data backup, global roaming internet access and all forms of connectivity throughout the UK.

Our dedicated Cambridge Metropolitan Area Network delivers internet and integrated connectivity solutions over a state of the art communications back-bone.
