Redstone Improve Communications throughout Cambridge

Cambridge can now benefit from much improved communications due to an extension to the fibre network, supplied by data communications giant Redstone.

Designed and installed by Redstone Managed Solutions, the huge underground Ethernet fibre ring creates an extension to their existing Metropolitan Area Network (MAN) that serves the entire City. This new provision provides more resource to the existing dedicated network that brings consistent broadband Internet access and other unique on-line services that are vital in today's marketplace.

At an additional length of 19 kilometers, the extension creates a total network length of some 45 kilometers that completely surrounds Cambridge. Totally dedicated to servicing business throughout the city, the network provides ease of access to the highly reliable attributes that fibre brings. Benefits such as high speed Internet access, the ability to connect multiple buildings, plus value-added services that can be tailored to exact needs.

Jon Nowell, Head of ISP and Metropolitan Networks at Redstone Managed Solutions comments, "The demand for improved, high-performance communication over the Internet is increasing all the time, especially within such technology driven locations as Cambridge. Our new fibre network meets the demand of all business users across the City, providing them with the ability to have tailored Internet solutions that are reliable, consistent and secure."

About Redstone Managed Solutions

Redstone Managed Solutions can manage and support your business networks from enterprise level through to the desktop, with a comprehensive single source service for business. Redstone Managed Solutions also provides hosting solutions from their London and Cambridge data centres, with scaleable solutions, from a single server to multiple racks. Internet solutions include managed MPLS networks, managed firewall, email filtering, online data backup, global roaming internet access and all forms of connectivity throughout the UK.

Their dedicated Cambridge Metropolitan Area Network delivers internet and integrated connectivity solutions over a state of the art communications back-bone.

As an established provider of IT and Internet solutions to the education sector, Redstone Managed Solutions provide secure Internet, email, hosting and domain registration services which have been specifically designed for schools and colleges.
